EZ-MON HD

2U HD/SD & CVBS + Audio

**High res 800x480 LCD
for your HD sources
with
BAR GRAPH
PPM or VU Meter
Audio level monitoring**

Auto switching between HD and SD SDI sources is a major feature of this compact monitoring Unit only 2U high. The high resolution 5" LCD produces scaled images from 1080, 720 and 586 sources and is ideal for Flyaway kit, S/ENG vehicles & TV Centre applications. Optimum performance is assured with menu control offering powerful set up and mode selection features. Instantaneous front panel switching provides instant selection between SDI or CVBS input sources, an on-screen banner briefly displaying the selected source's detected standard. A fully equalised & reclocked HD/SD throughput, together with a high impedance "copper" loop of the CVBS input, are standard. The selected SDI embedded Group, or an external 4 Ch audio Group, are monitored on the stereo loudspeaker with optional PPM (or VU) meters, **or** up to 16 channels of embedded audio may be displayed in Bar format with preset BBC/Nordic/Din PPM or VU ballistic on the separate Bar LCD. Utility balanced OPs of the selected Group, and a fully buffered volume control feed, are provided on the rear panel.

Power is fed via 3 pin IEC connector to the internal "universal" power supply, eliminating wall warts; and an external +12 V input option is available for battery operation. A whisper quiet fan ensures cool running under all operational conditions.

Outline Specification

- * Only 2U High, 200 mm deep.
- * 16:9 native, 4:3 switchable.
- * 720/1280/1920 auto-scaling.
- * High resolution 800x480 LCD.
- * HD/SD SDI Autoswitching.
- * Bright, clean pictures.
- * < 20 Watts, 100 ~ 240V ac
- * Whisper quiet fan.
- * De-embedded 4 channel audio.
- * External 4 Ch analogue input.
- * 16 Ch Embed' audio histogram **or**
- * PPM / VU with PHASE & Pk.
- * Phones & 10W stereo amplifier.
- * "Touch latch" source selection.
- * Selected Group & Volume'd OP.
- * IEC mains input connector.
