

# Ki-Pro Monitoring Unit

## Mobile and Fly-Away

### Self-contained Monitoring & Power in 2U

Murraypro offer a cost effective Monitoring Unit specifically designed to provide Field Monitoring and mains powered operation for Client's Ki-Pro Recorders in Mobile and 'Fly Away' Applications. The 2 U rackmount frame firmly supports AJA's popular Ki-Pro Field Recorder with a choice of two mounting positions. The 'low profile' format aligns the Recorder front flush with the frame; whilst the other, where space permits, offers enhanced accessibility to the memory module with the Ki-Pro mounted 20mm proud of the rack front. Either mounting position in the Monitoring chassis allows unrestricted access to the rear panel of Ki-Pro for external cabling.

The completely self-contained Monitoring Unit sports a high resolution LCD panel and a powerful 8W wide response loudspeaker, providing immediate monitoring of the Ki-Pro's RX & PB functions via the Composite OP and unbalanced Phono OPs; freeing up the SDI, HDMI, Component Video & XLR Audio connectors for other use. The Ki-Pro stereo OP is fed via independent L & R channel muting to the loudspeaker's mon-aural mixer, a really useful monitoring feature which helps guard against audio 'Phase' errors.

Mains via a 3 pin IEC320 powers the internal 60 W PSU, no "Wall Warts" here, providing power for Monitoring and operation of the Ki-Pro when frame mounted. Murraypro's Monitor Unit is supplied complete with clamp screws and all the cabling required to interface with Ki-Pro Recorder.

### Outline Specification

- \* 4.3", 480x234, 500cd/M<sup>2</sup>, Hi contrast LCD.
- \* 8W nominal, 150Hz~20KHz loudspeaker
- \* 12V power to Ki-Pro via XLR4
- \* Independent L & R Muting
- \* Unrestricted access to Ki-Pro rear panel
- \* Internal 100~240V 47~63Hz Universal PSU
- \* Mains input on 3 pin IEC320 connector.
- \* 484W x 88H x 170D
- \* 2.8Kg net, 4.5KG gross inc Ki-Pro & cabling

Registered Trade Marks & Brand Names acknowledged.
