

PPM 8

Silky smooth Peak Programme Metering

Extremely low external magnetic field,
will not affect adjacent CRTs

8 Channels of PPM in only 1U

To accommodate the proliferation of multi-channel audio programme production, Murraypro has designed the 1U PPM 8; catering for these diverse needs via its flexible input interface. Mechanical Peak Programme Meters with their clear scale are particularly "easy on the eye", as the PPM's classical fast attack and slow decay characteristic is very easy to follow, even after long periods. Practitioners soon find that simply appreciating the "angle" of the pointer gives precise indication of level, without the fussy quantized steps of an LED display. Do not misunderstand this apparent simplicity however, as the PPM-8's digital processing will resolve differences of only 0.1dB!

PEAK level indication is provided for each audio channel and PHASE monitoring is provided on Go/NoGo green-red LED between pairs of inputs, maximising the PPM-8's usefulness in applications where stereo pairing is required..

Outline Specification

- * Only 1U High, 200mm deep.
- * Silky smooth PPM drive.
- * Universal Power Supply.
- * White LED illumination.
- * AES interface available.
- * High visibility scaling.
